A new collection of academic and policy research covering environmental stresses and their impact on society
JSTOR Sustainability is a collection of academic literature and policy research that explores issues of environmental and development stressors and their impact on society.

Intended for researchers and students at all levels, this new resource brings together key journals and research reports that are critical for this emerging field, alongside functionality that helps discover and interpret research across disciplines.

The collection was built in collaboration with librarians, scholars and policy researchers. It includes 145 journals and over 5,000 research reports from leading think tanks worldwide, and includes both current and archival content. It spans more than 20 disciplines, and addresses topics including:

- Natural Resources Law
- Energy Policy
- Sustainable Business Practices
- Built Environment
- Urban Studies and Planning
- Development Studies
- Environmental Engineering
- Climatology and Atmospheric Science
- Human Ecology
- Green Energy
- Transportation and Infrastructure
- Land Conservation
- Environmental History
- Agricultural Economics
- Public Health
- Water Management
